

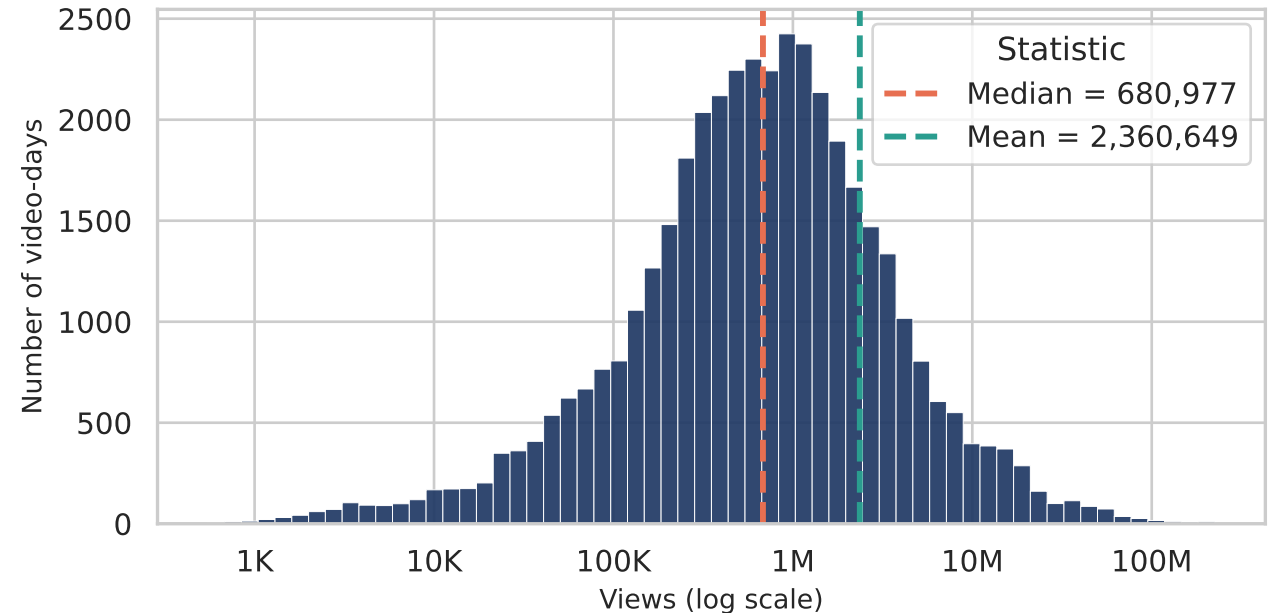

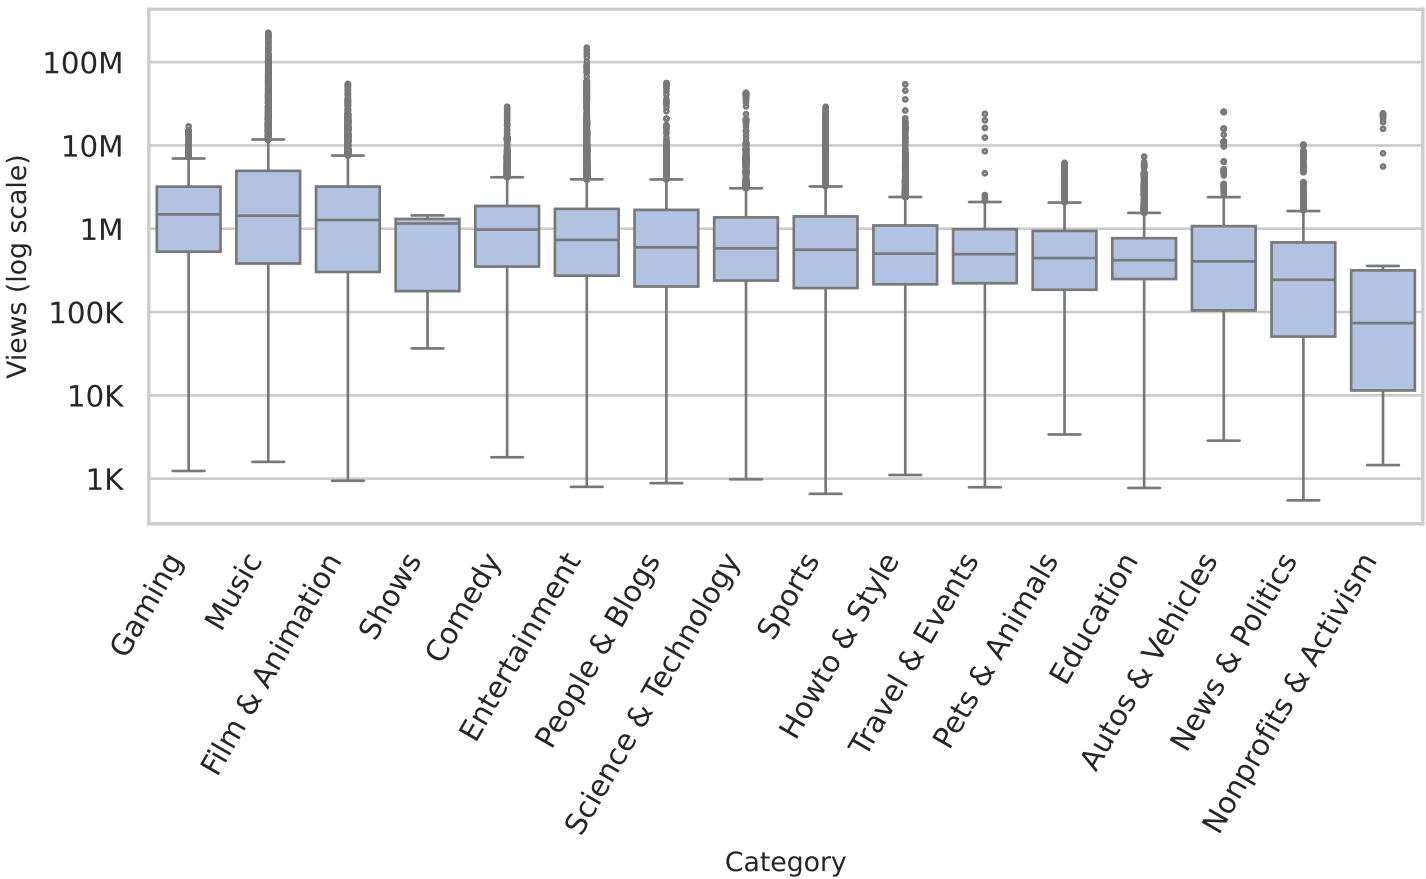

Figure 1: Views are heavily right-skewed

(a) Distribution of views per video-day (log scale)

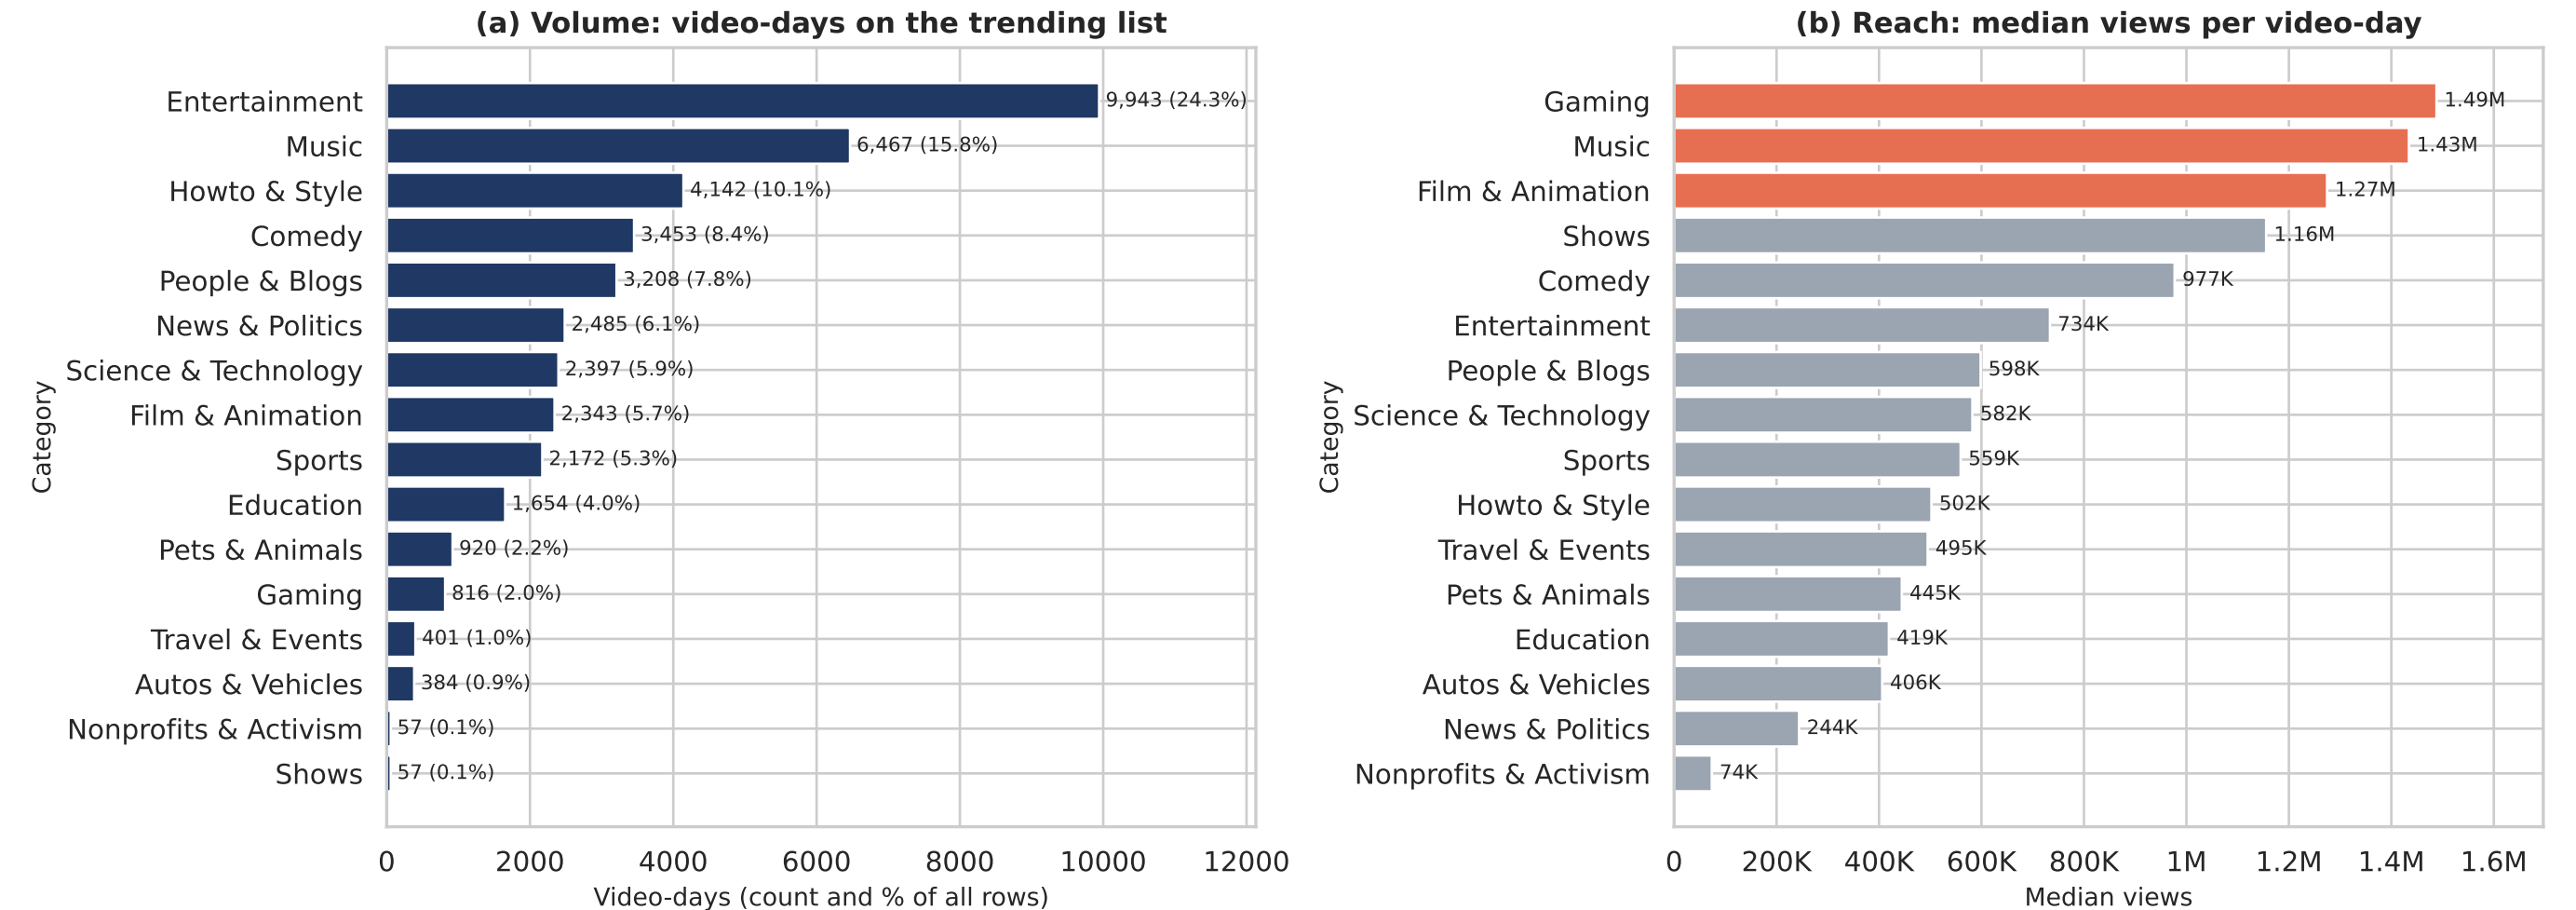

(b) Views by category (box = middle 50%, dots = outliers)

Note: The mean is 3.5x the median. By the IQR rule, 4,498 rows (11.0%) are outliers (above 4.19M views). Maximum = 225,211,923 views (Childish Gambino - This Is America).

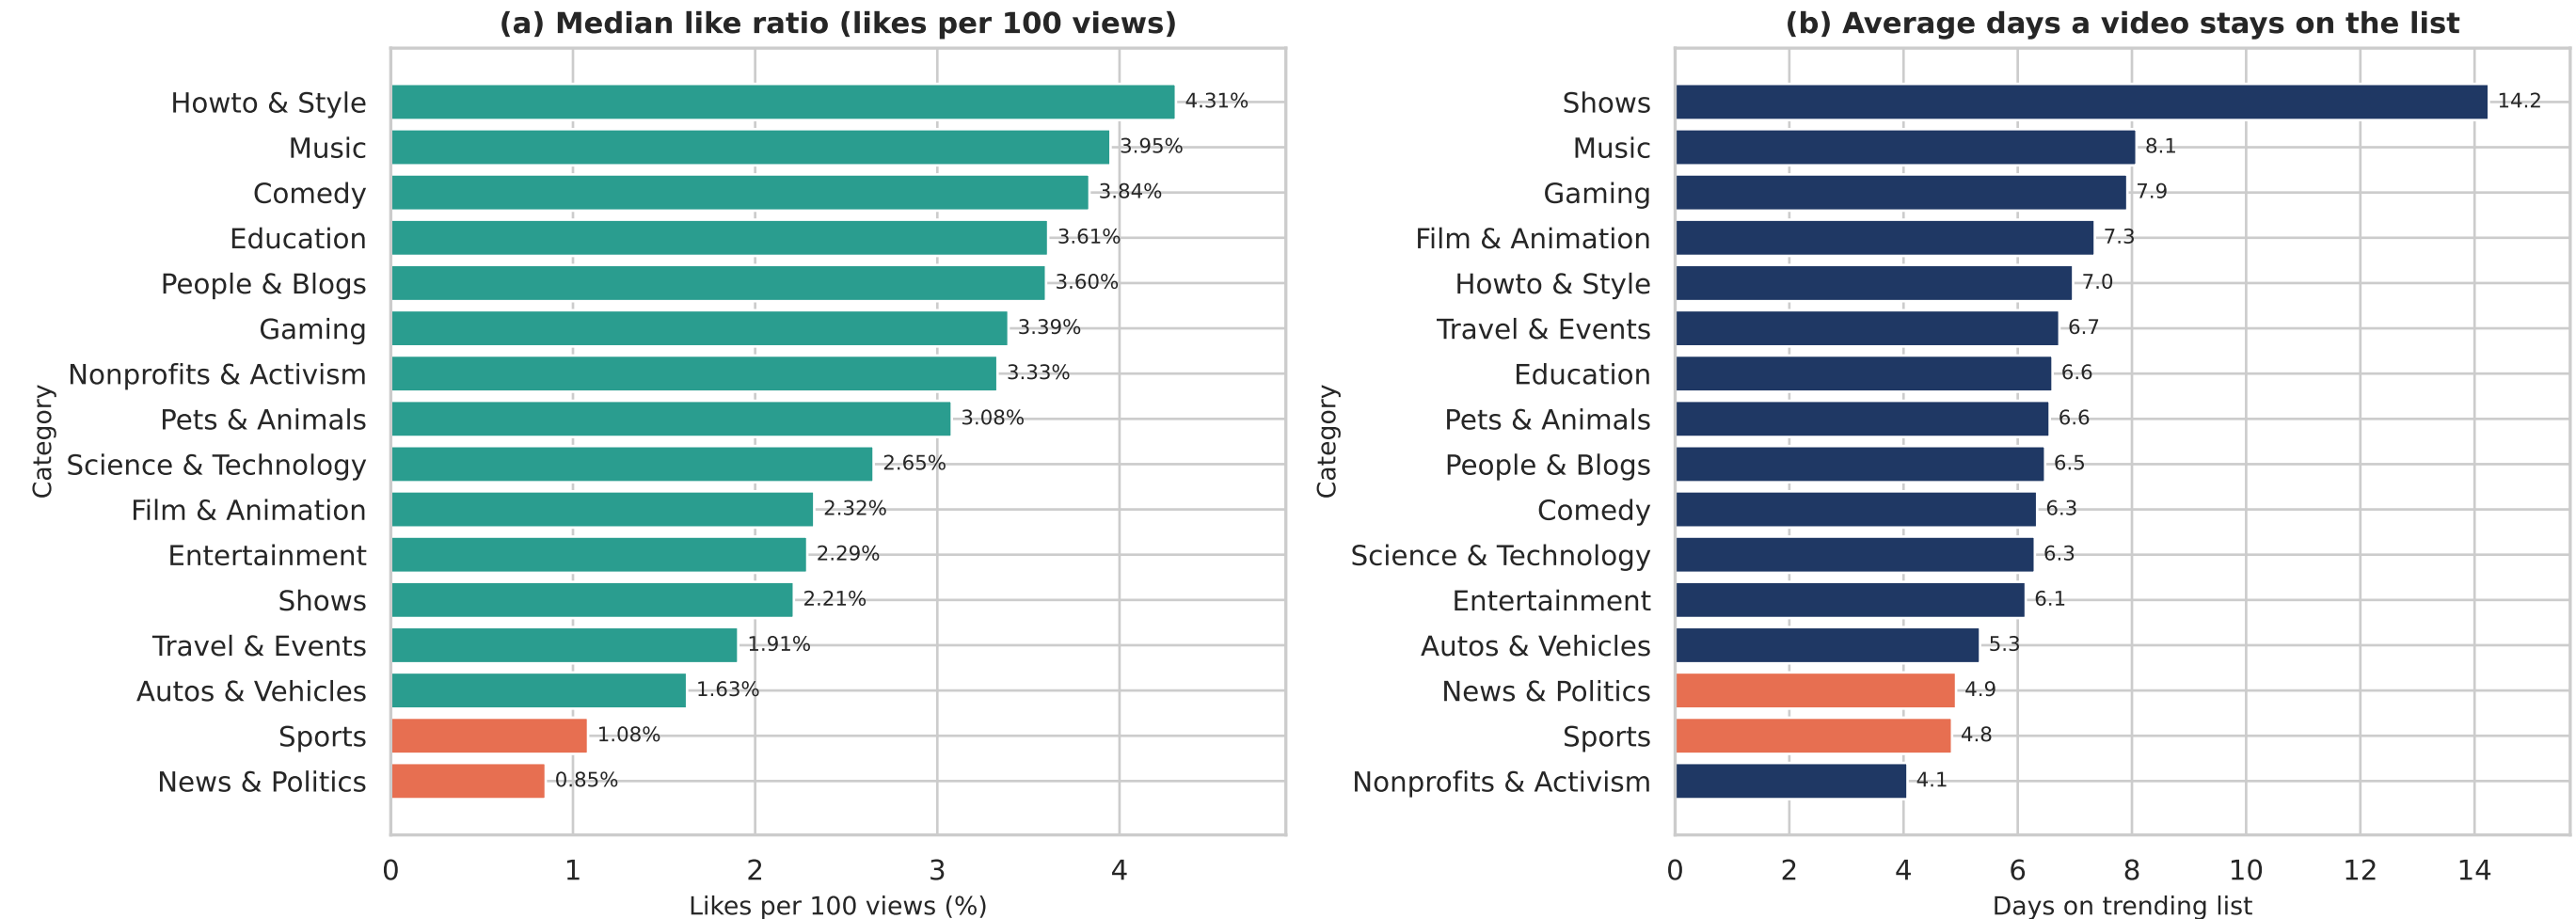

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos

Figure 2: Entertainment & Music dominate volume; Music, Gaming & Film dominate reach

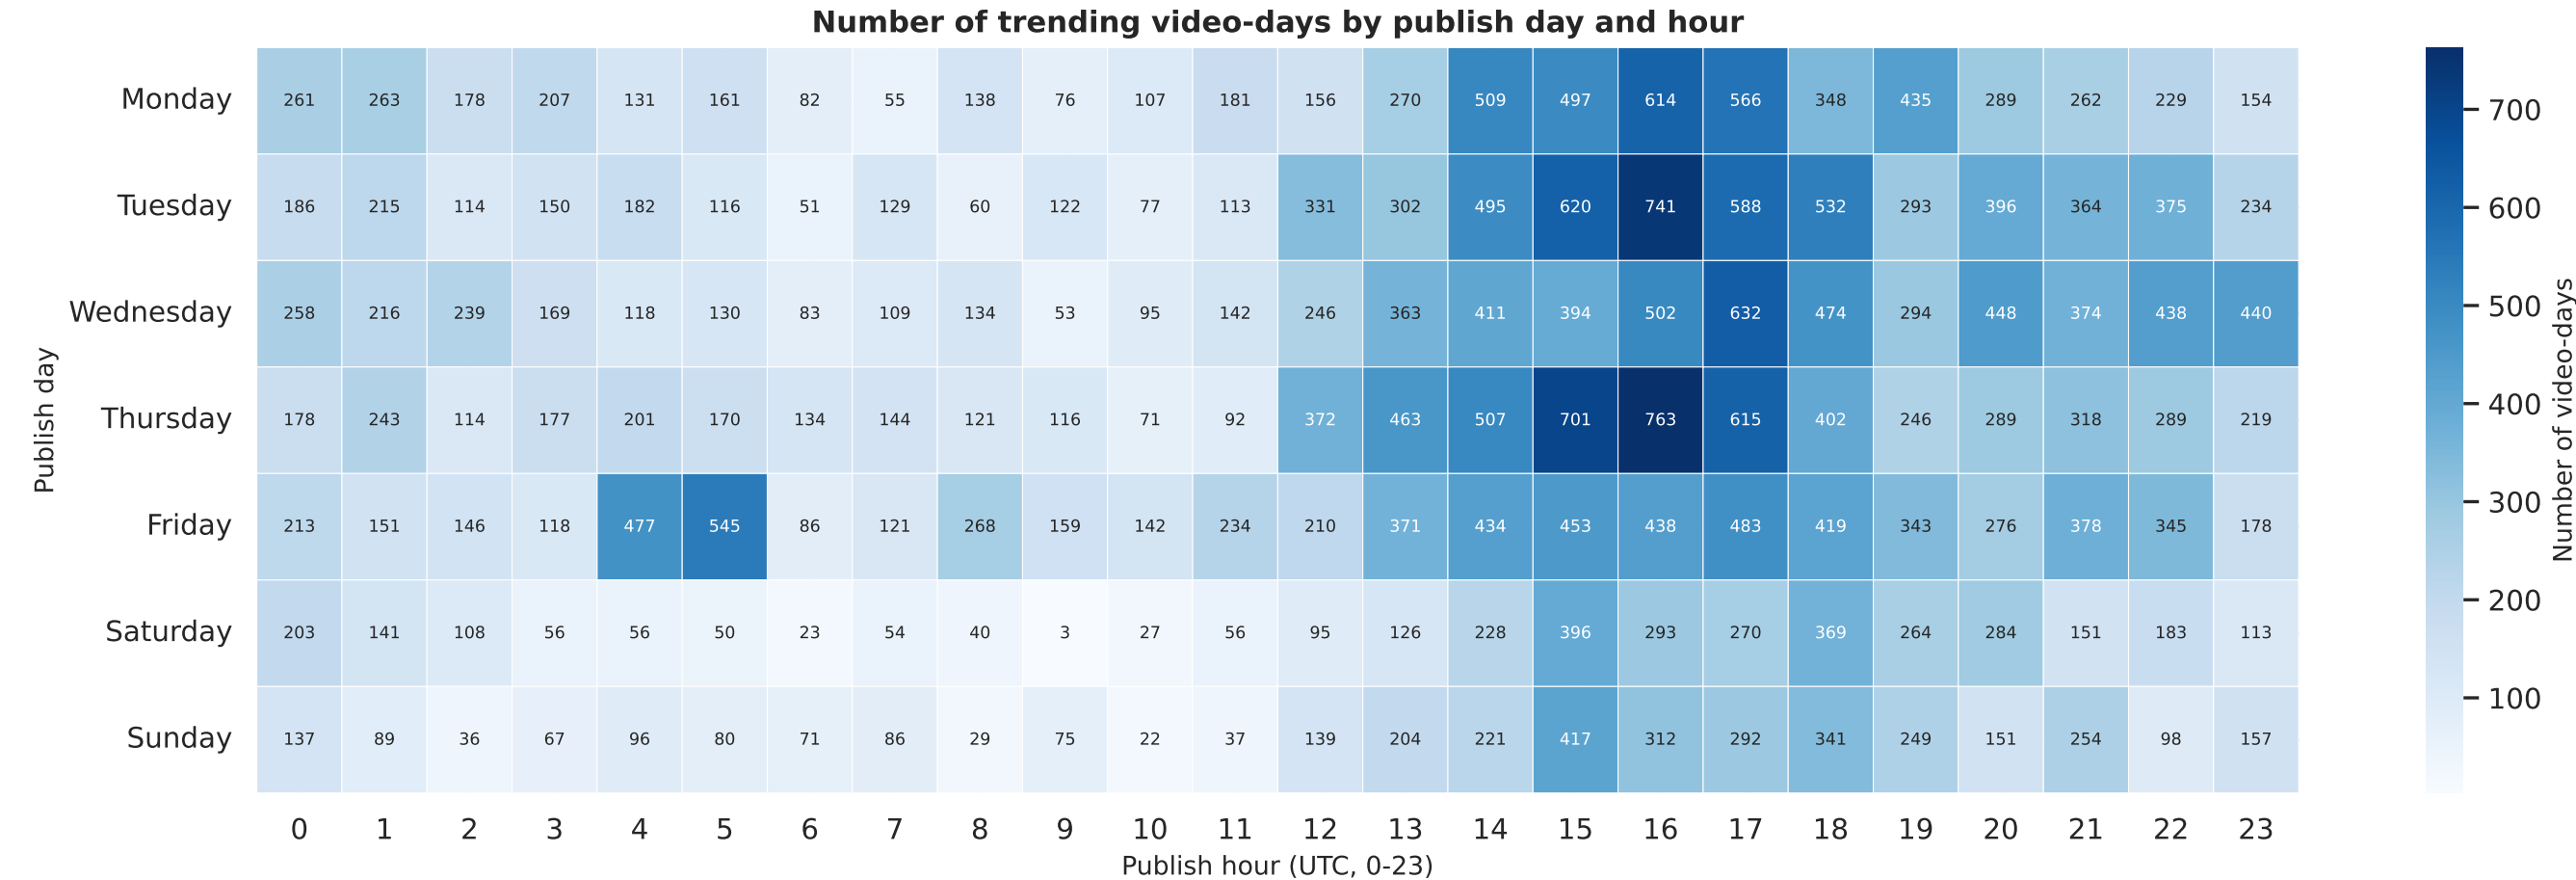

Note: Orange bars = the three highest-reach categories. Nonprofits & Activism and Shows have only 57 rows each, so their figures should be read with caution.

Figure 3: News & Sports get fewer likes and a shorter time on the list

Note: Orange bars highlight News & Politics and Sports. Like ratio = likes / views for rows where ratings are enabled. 'Shows' (4 videos) stays longest on average but is a very small sample.

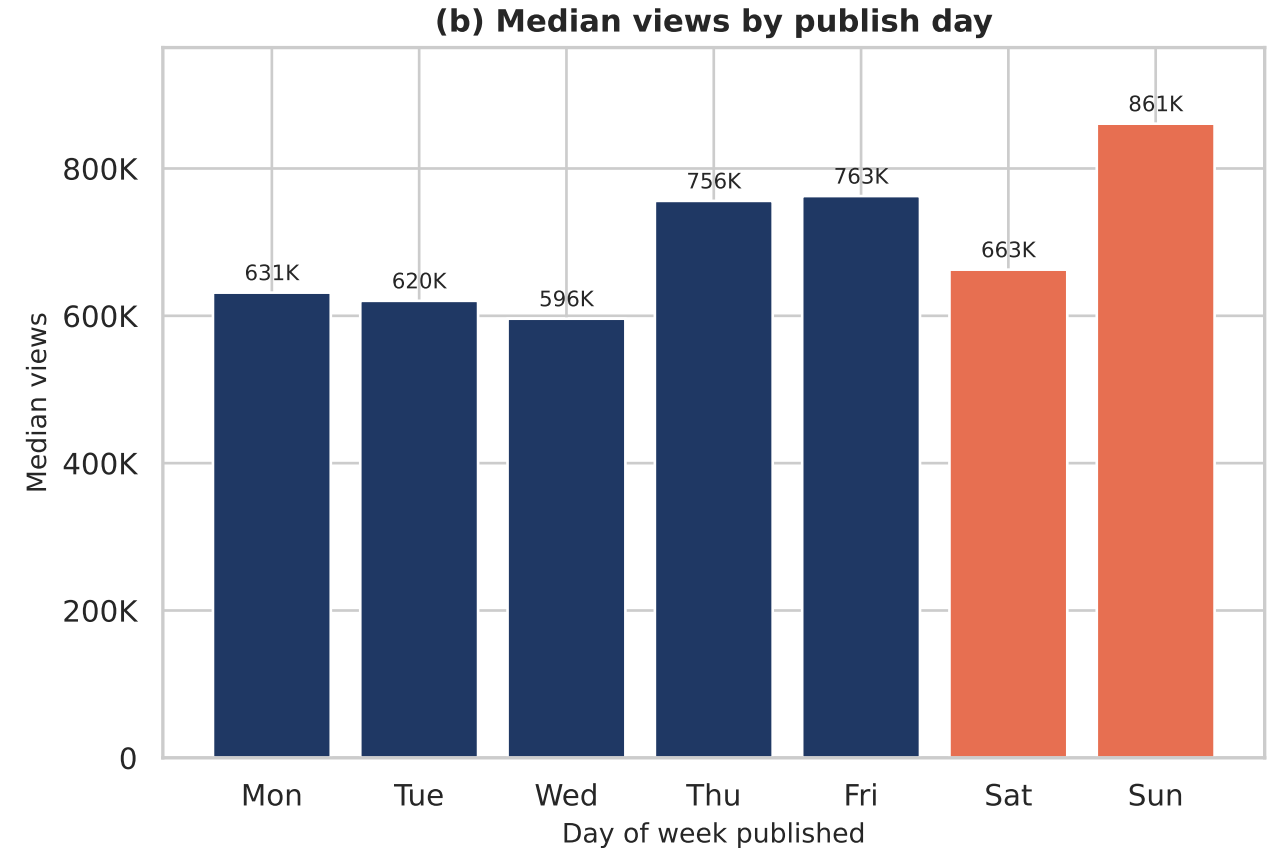

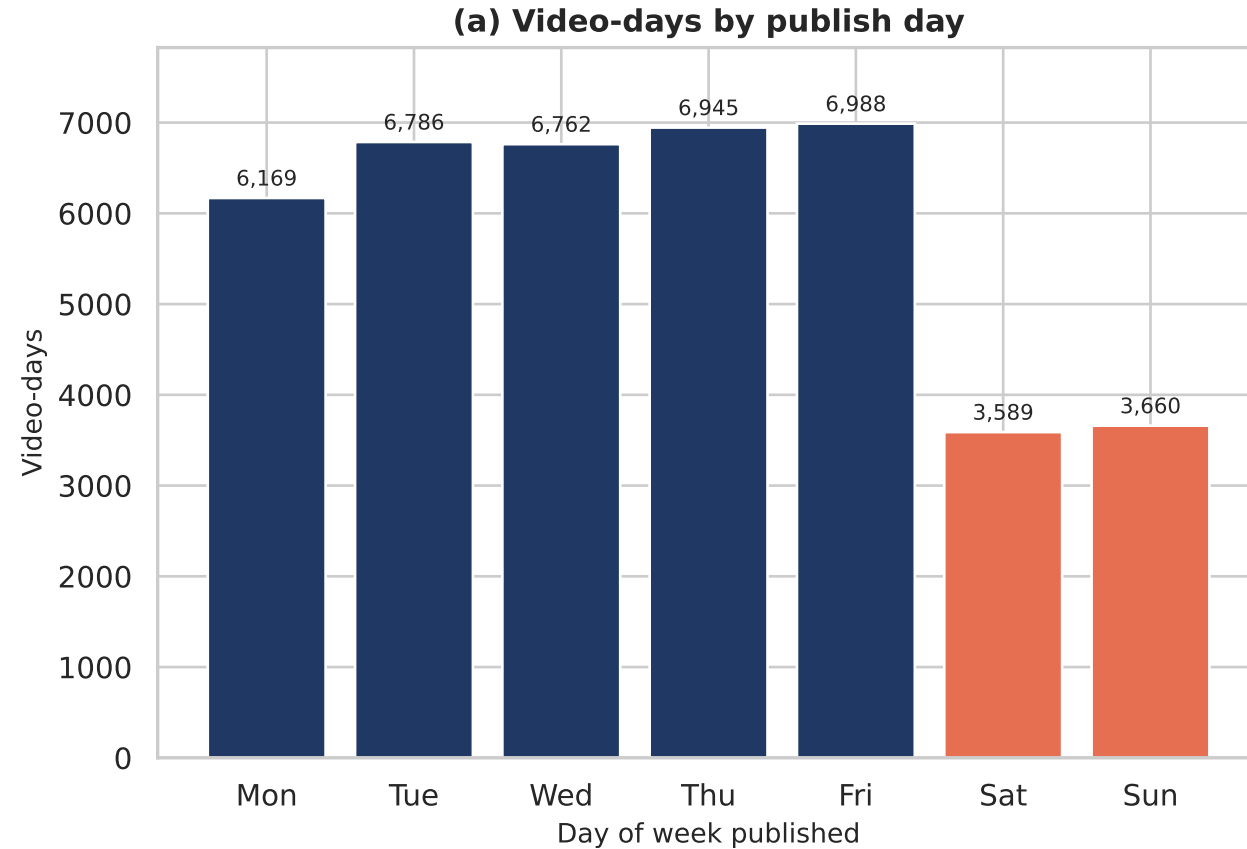

Figure 4: Weekday afternoons (UTC) are the peak publishing window

Note: 32.7% of trending rows were published between 14:00 and 17:00 UTC (about 9am-12pm US Eastern). Darker cells = more videos.

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos

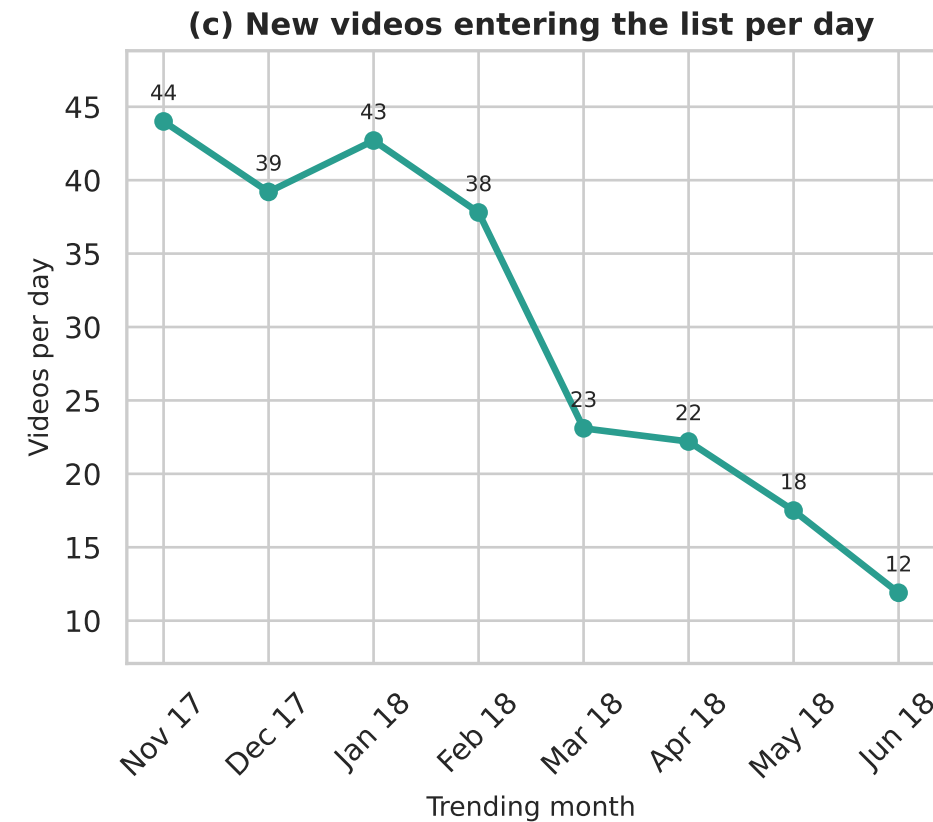

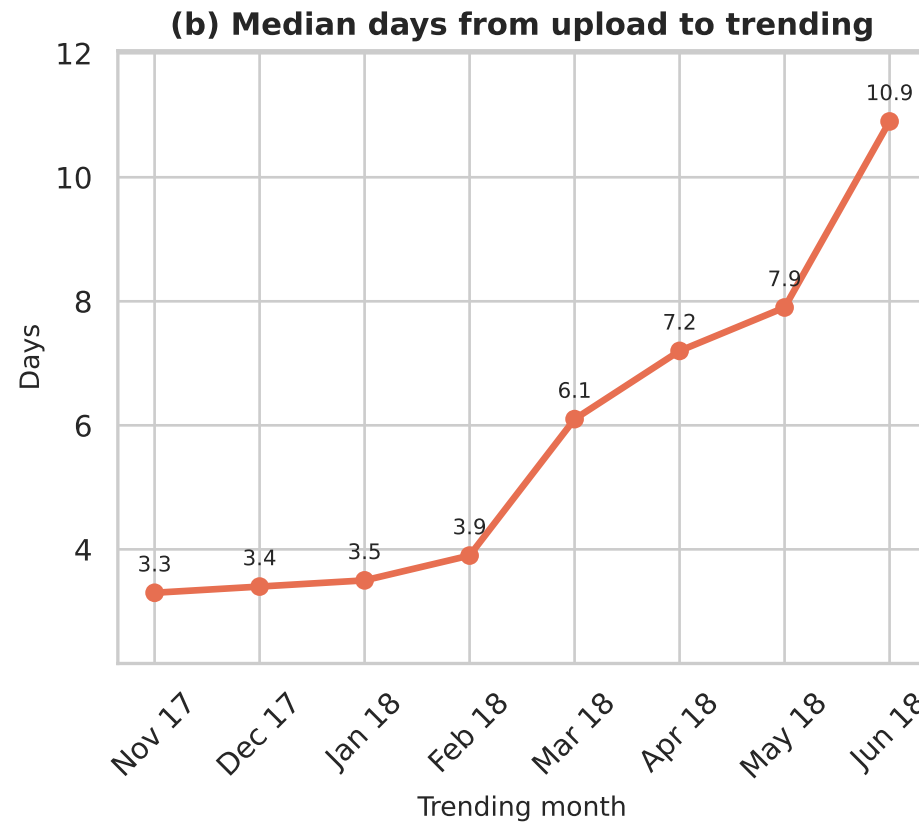

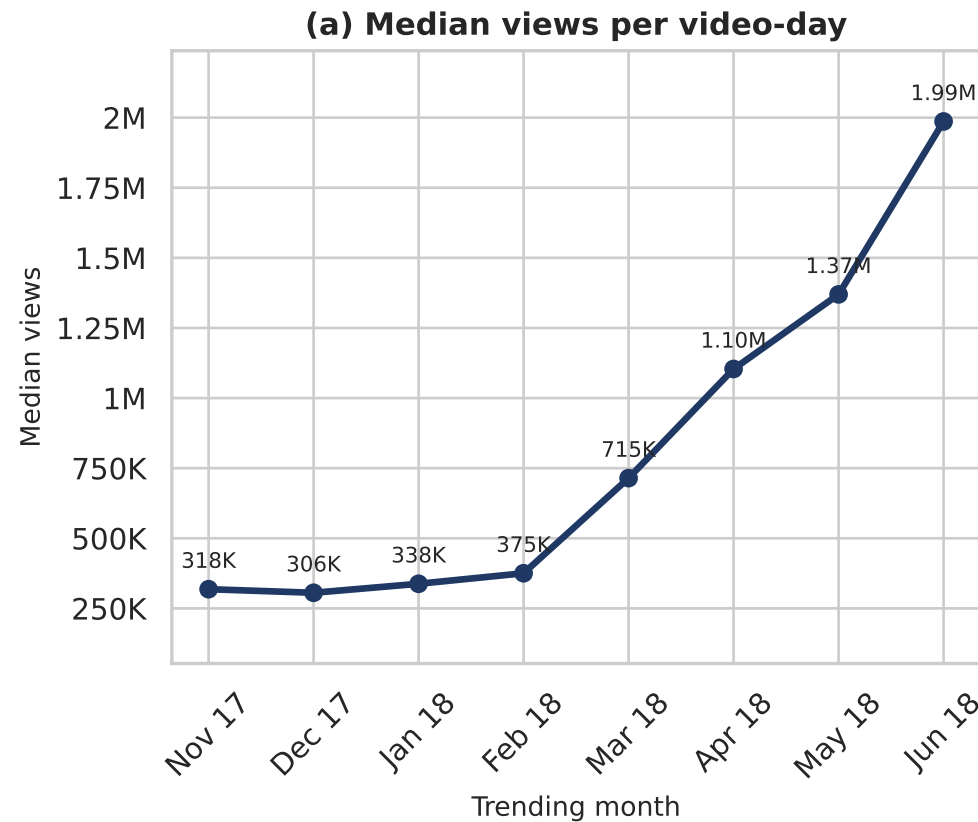

Figure 5: Weekend uploads are fewer but earn higher median views

Note: Orange = Saturday and Sunday. Weekends are 17.7% of rows (28.6% if evenly spread). Median views: weekend 752,453 vs weekday 661,941.

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos

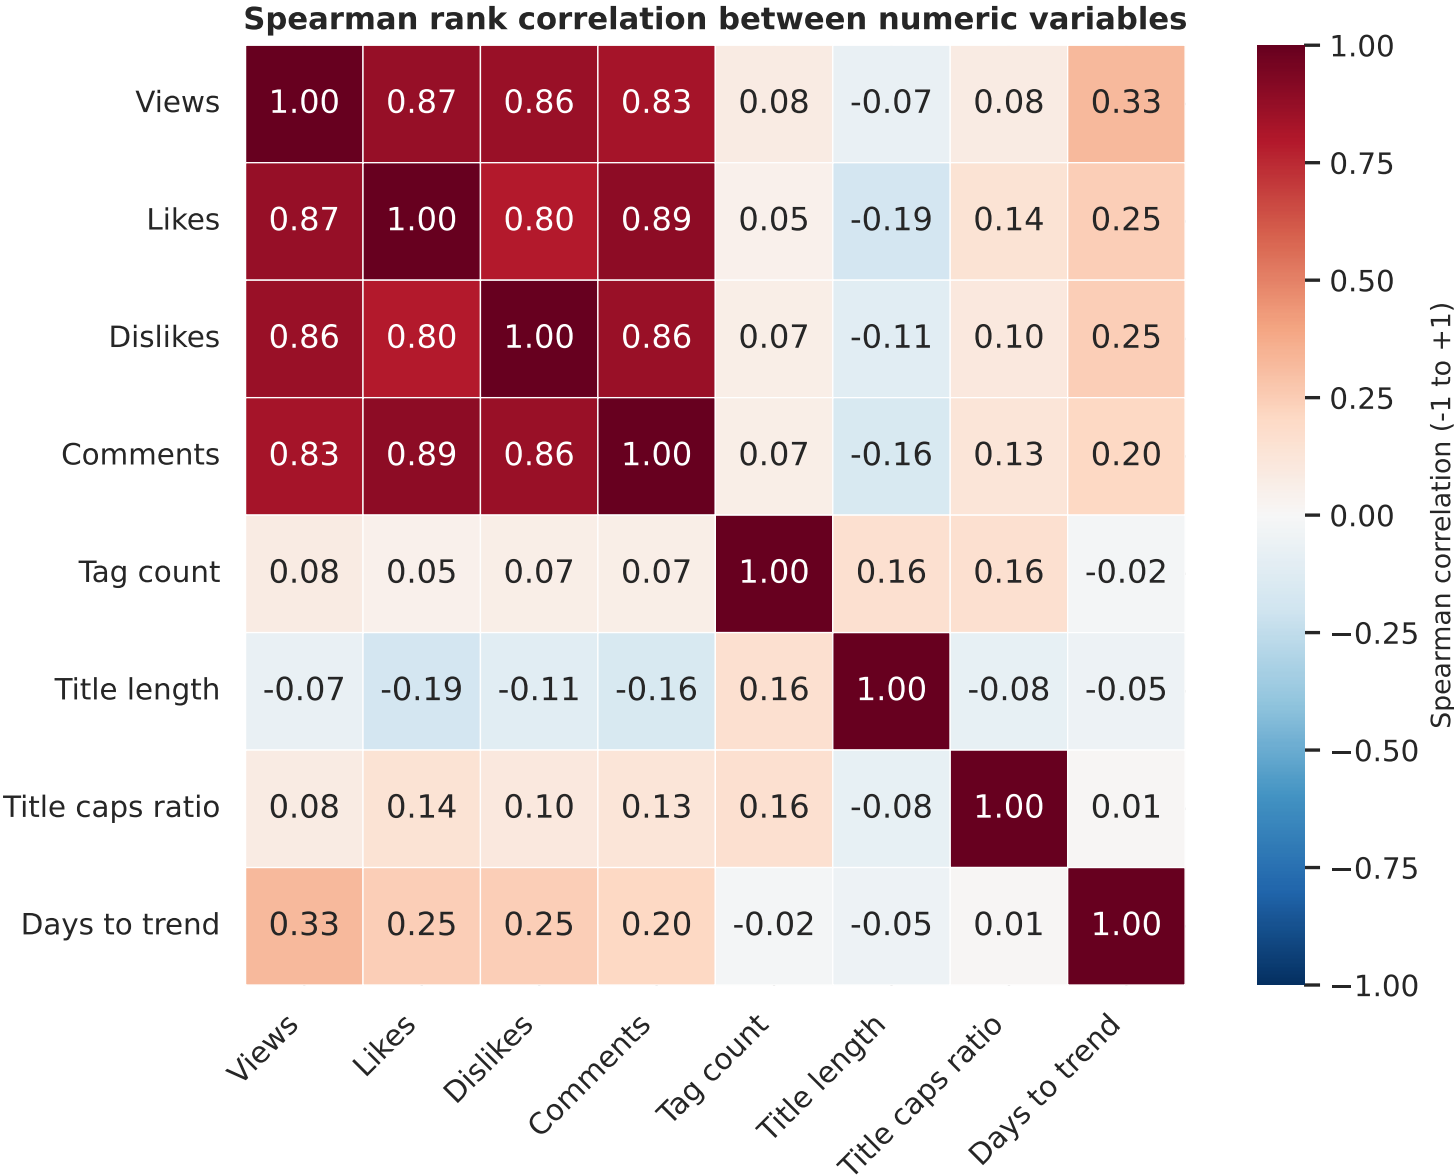

Figure 6: A clear shift from March 2018: bigger videos, slower to trend, less turnover

Note: Jun 2018 covers only 14 days (to 14 Jun). The first trending day (14 Nov 2017) is excluded from panel (c) because all 200 videos are 'new' on day 1. A change in YouTube's trending algorithm is a plausible cause but cannot be proven here.

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos

Figure 7: Engagement metrics rise together; tags and title style barely matter

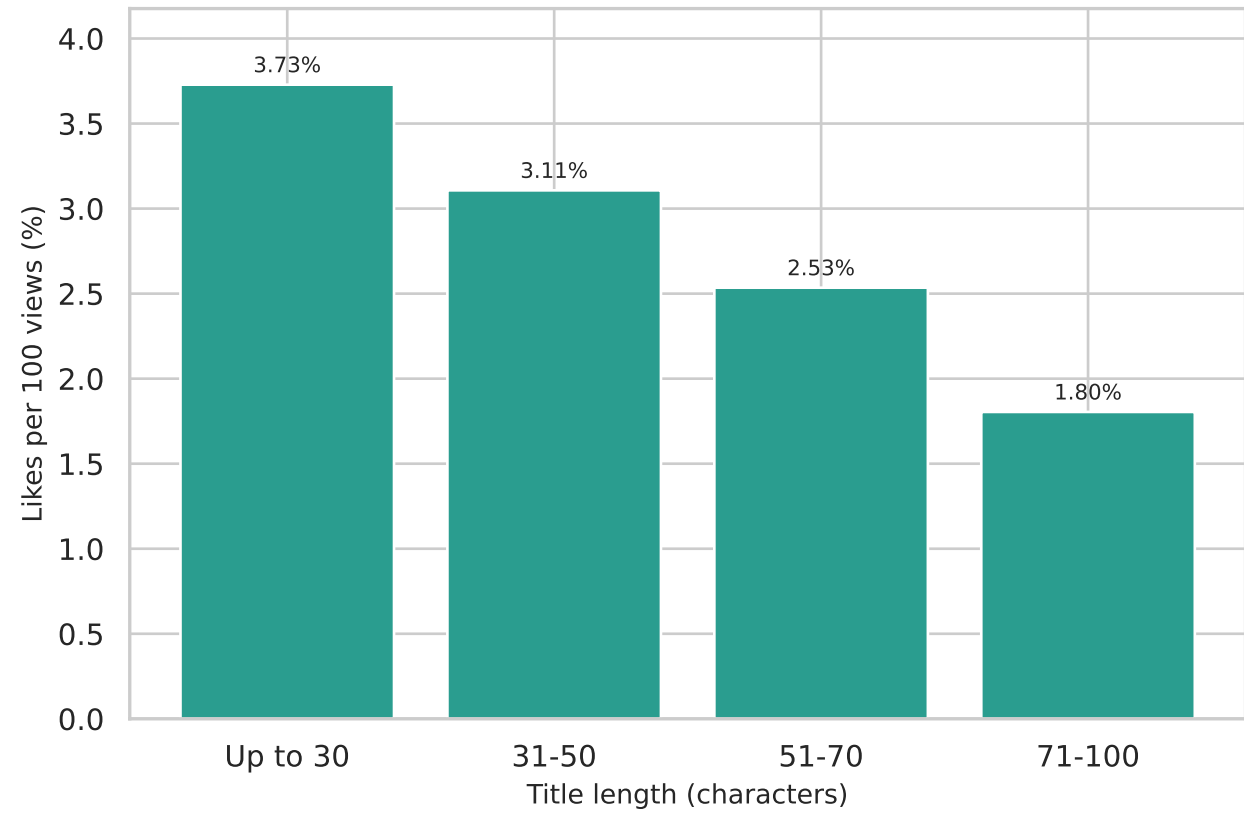

Note: Views-likes = 0.87, views-comments = 0.83, views-tags = 0.08. Likes, dislikes and comments exclude rows where ratings/comments are disabled. Correlation does not imply causation.

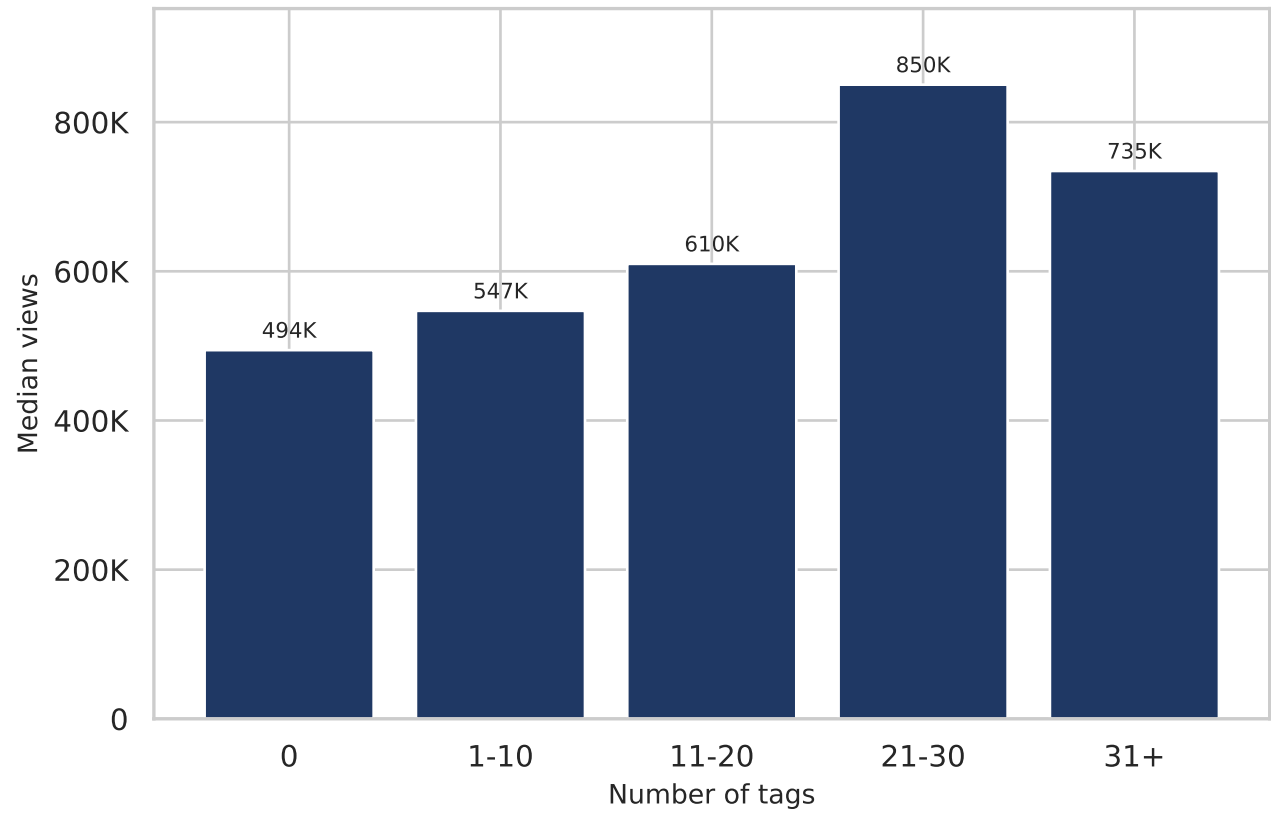

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos

Figure 8: Shorter titles earn a higher like ratio; more tags show higher median views

(a) Median like ratio by title length

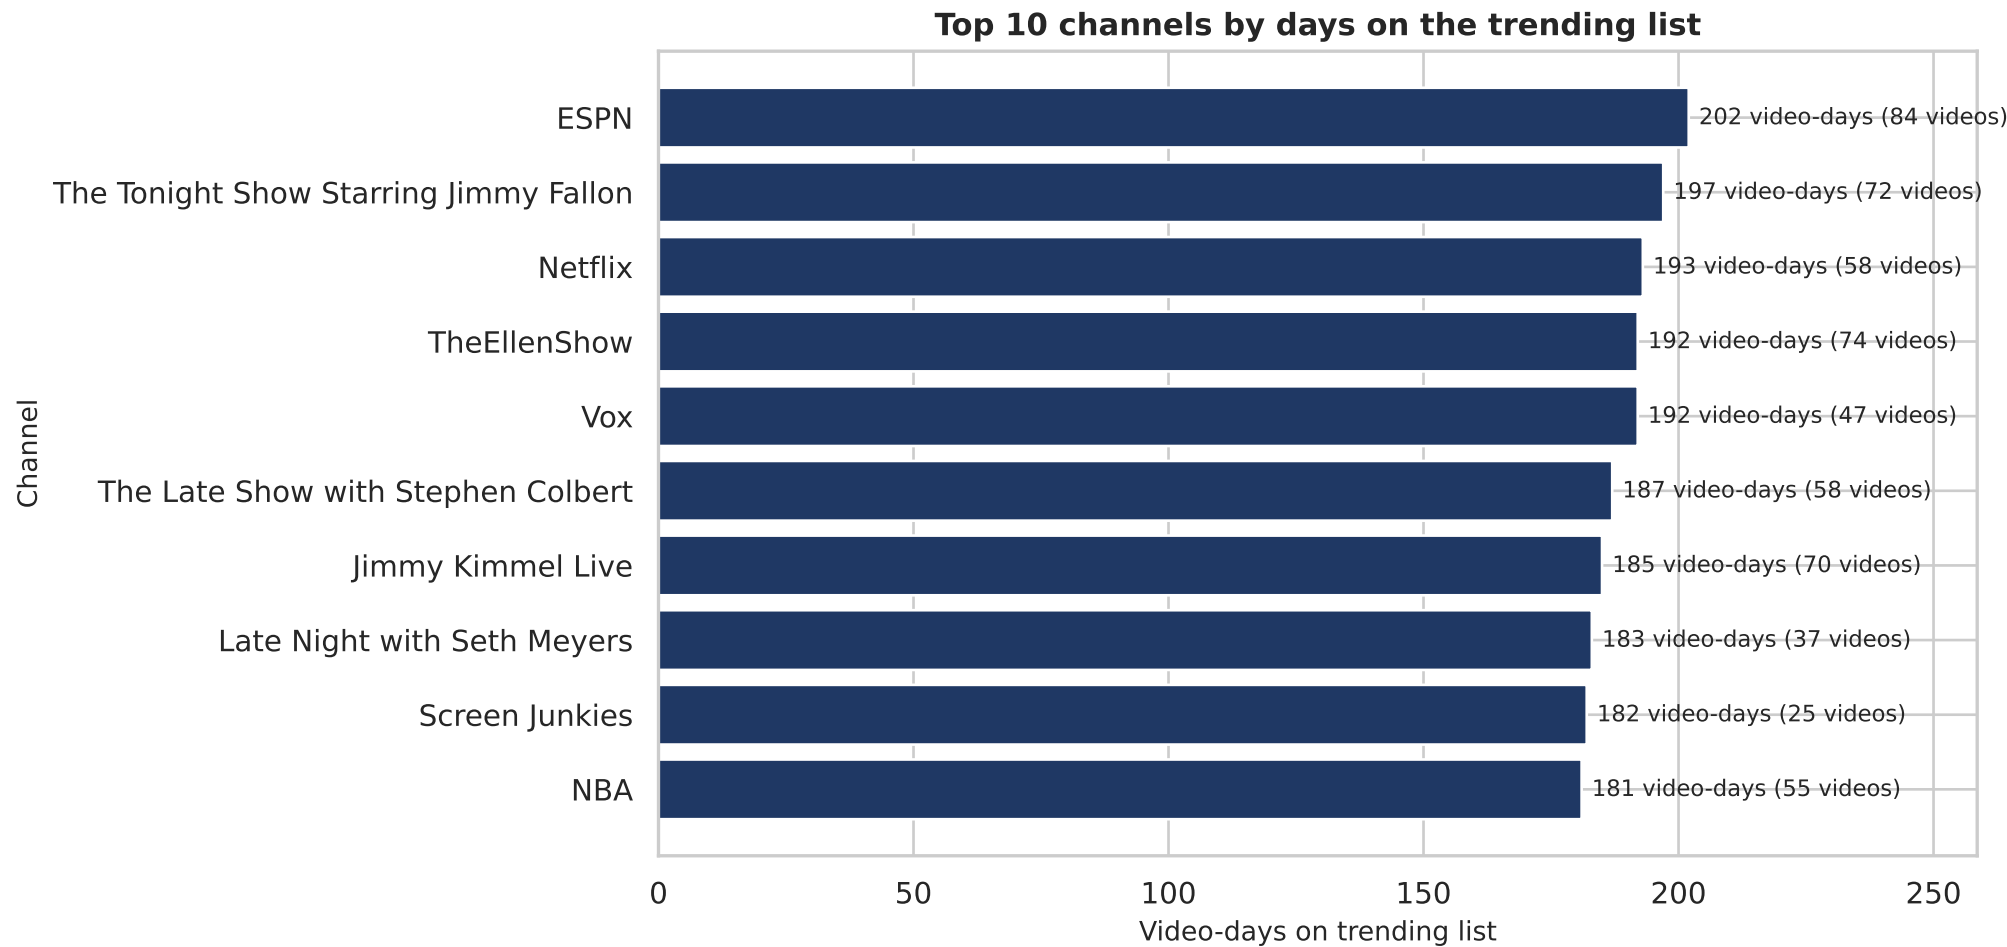

(b) Median views by number of tags

Note: Associations only, not proof of cause: tag count and title length have near-zero rank correlation with views (0.08 and -0.07).

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos

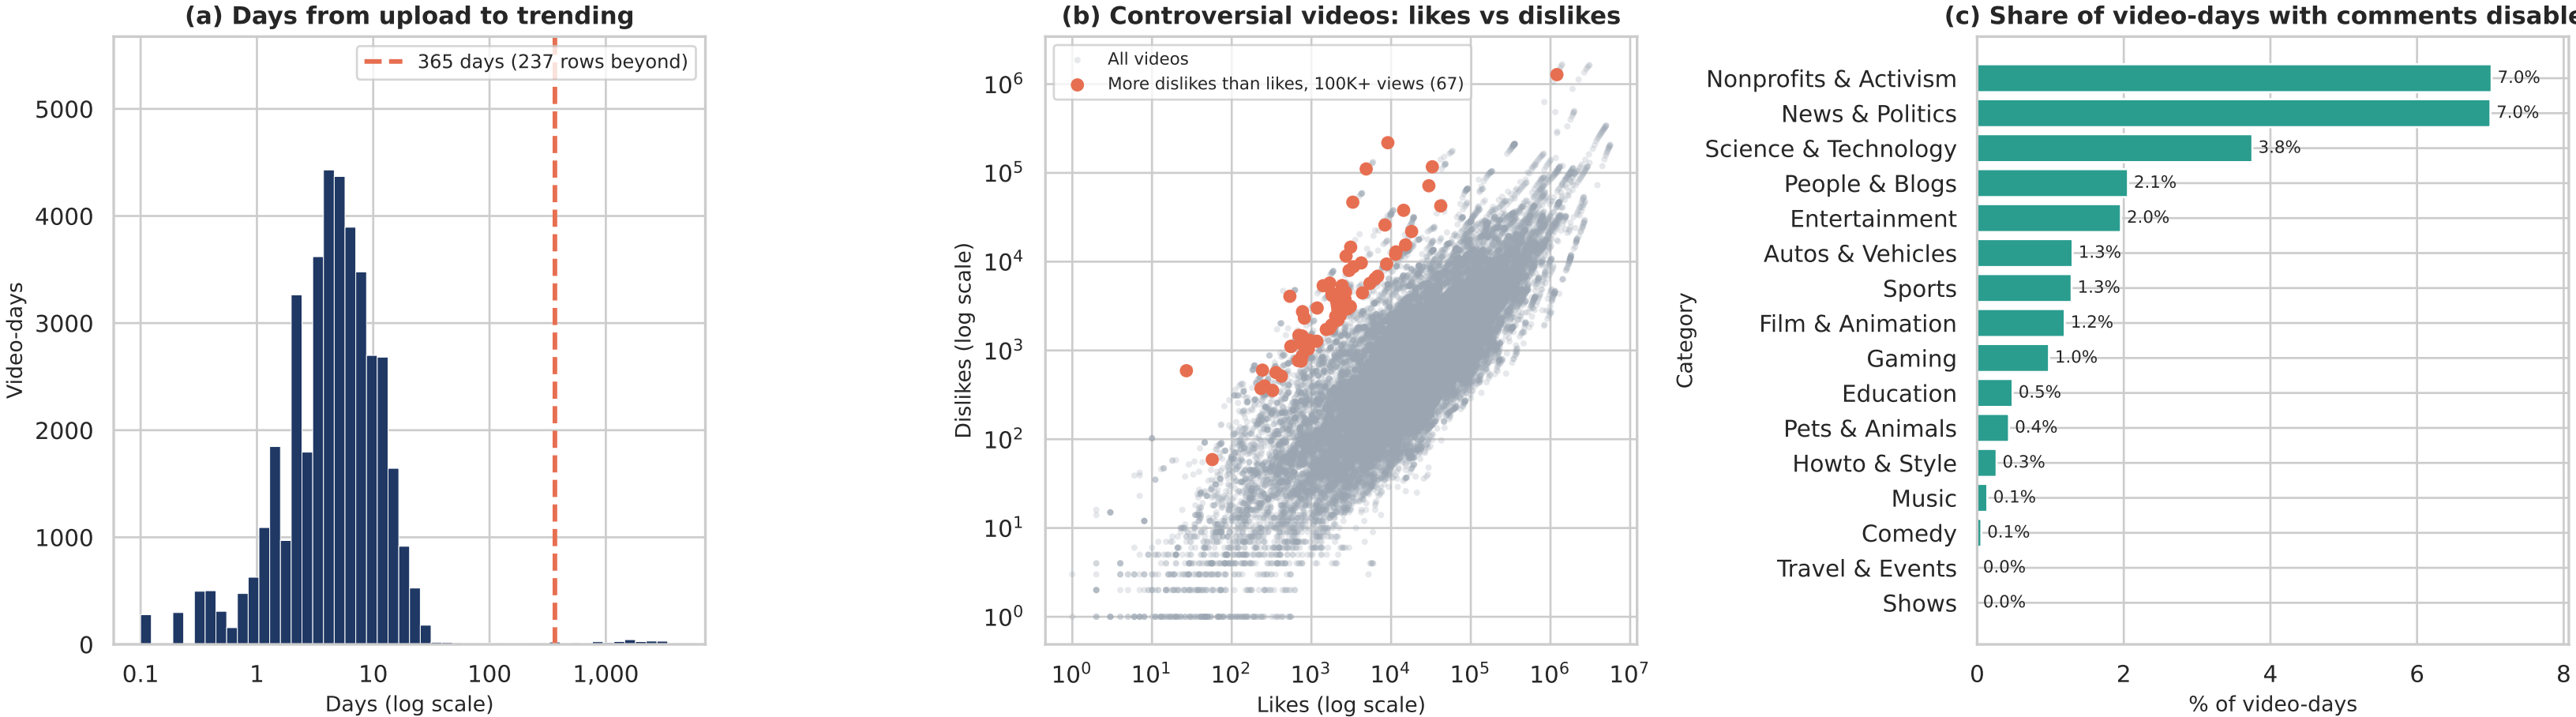

Figure 9: Late-night shows, sports and media brands appear most often

Note: The top 10 channels account for only 4.6% of all rows, so the list is spread across 2,203 channels.

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos

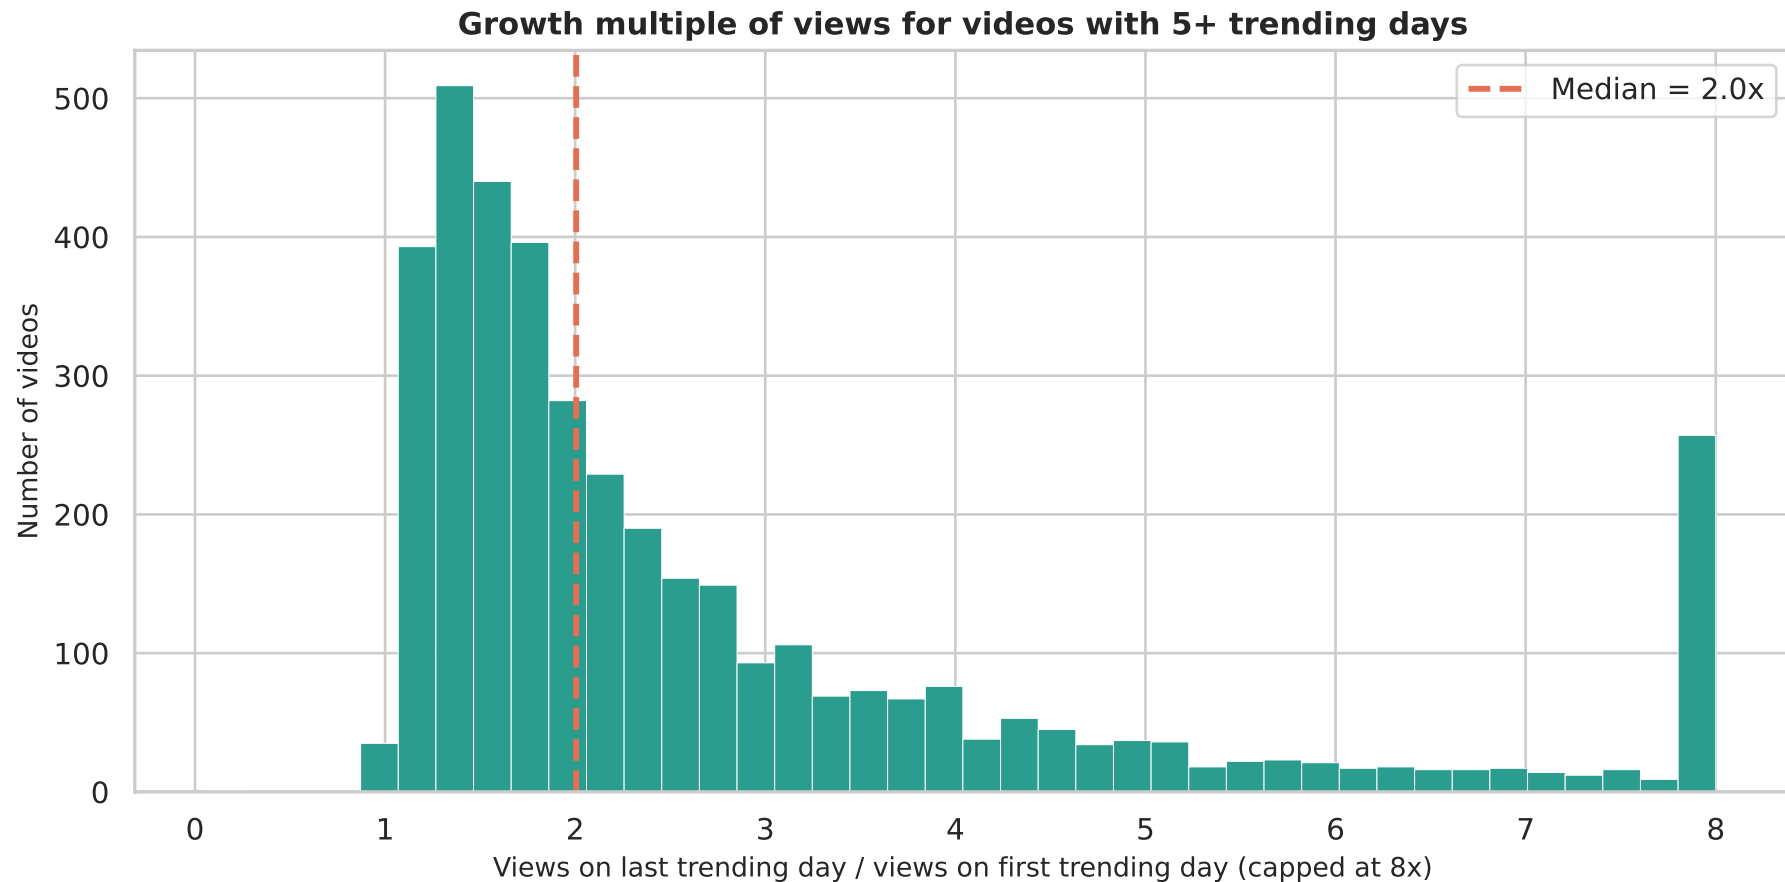

Figure 10: Anomalies: revived old videos, controversial videos and disabled comments

Note: (a) Longest gap: 4,214.6 days (about 11.5 years, a Budweiser ad). (b) Includes YouTube Rewind 2017 with 1.64M dislikes. (c) Comments are disabled most often in News & Politics and Nonprofits & Activism (about 7%).

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos

Figure 11: Views roughly double while a video stays on the list

Note: Based on 3,981 videos that stayed on the list 5 or more days. Median stay for all videos = 6 days (maximum 29 days). Views are cumulative snapshots.

Source: YouTube Trending Videos (US), cleaned dataset from SWYNEX Task 1 | 14 Nov 2017 - 14 Jun 2018 | n = 40,899 video-days, 6,351 unique videos
